

Day 3

Hutchinson Engineering Clinic

Circuits

Aerodynamics

Today we will learn about...

What is electricity?

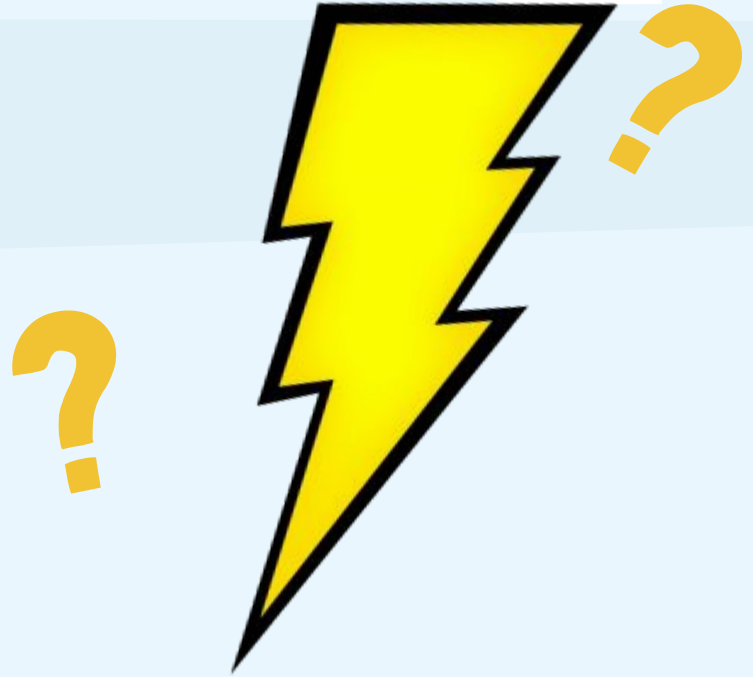

What are circuits used for?

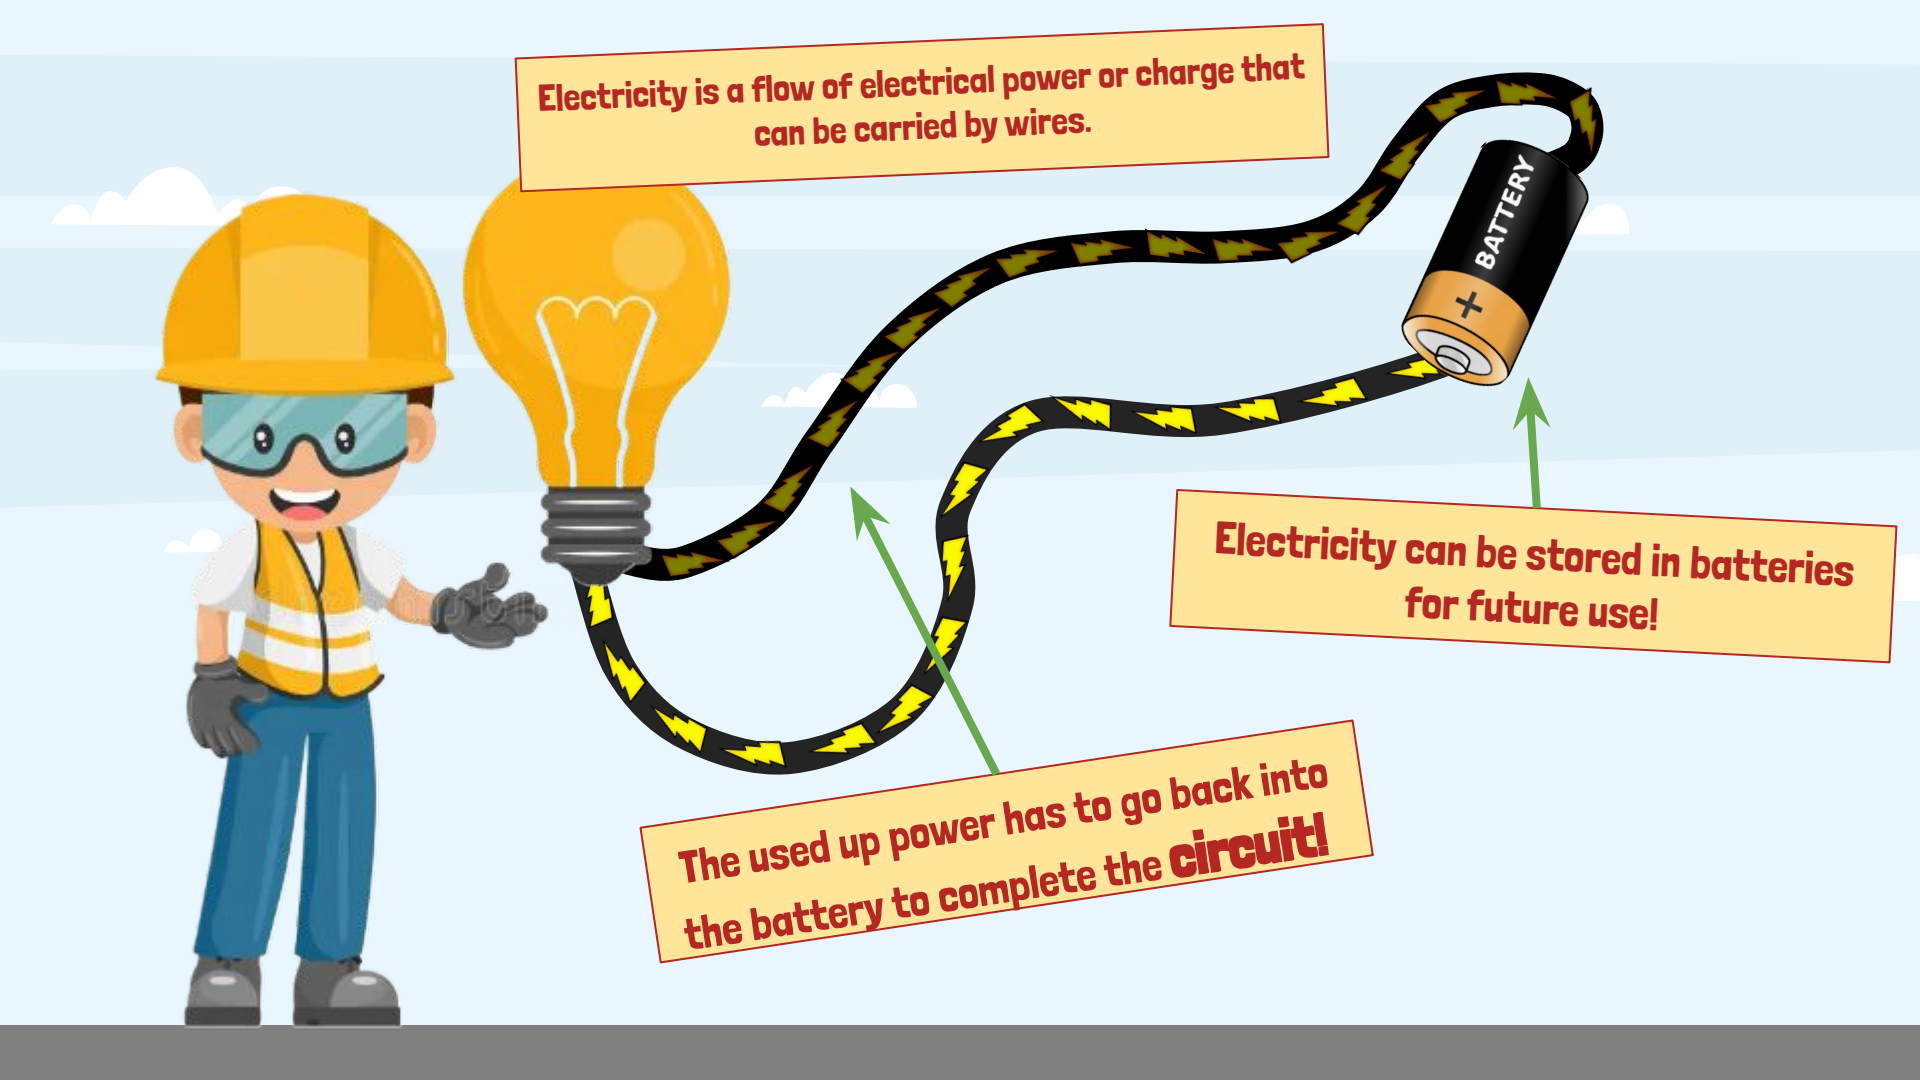

How do they work?

**Question: What is
electricity?**

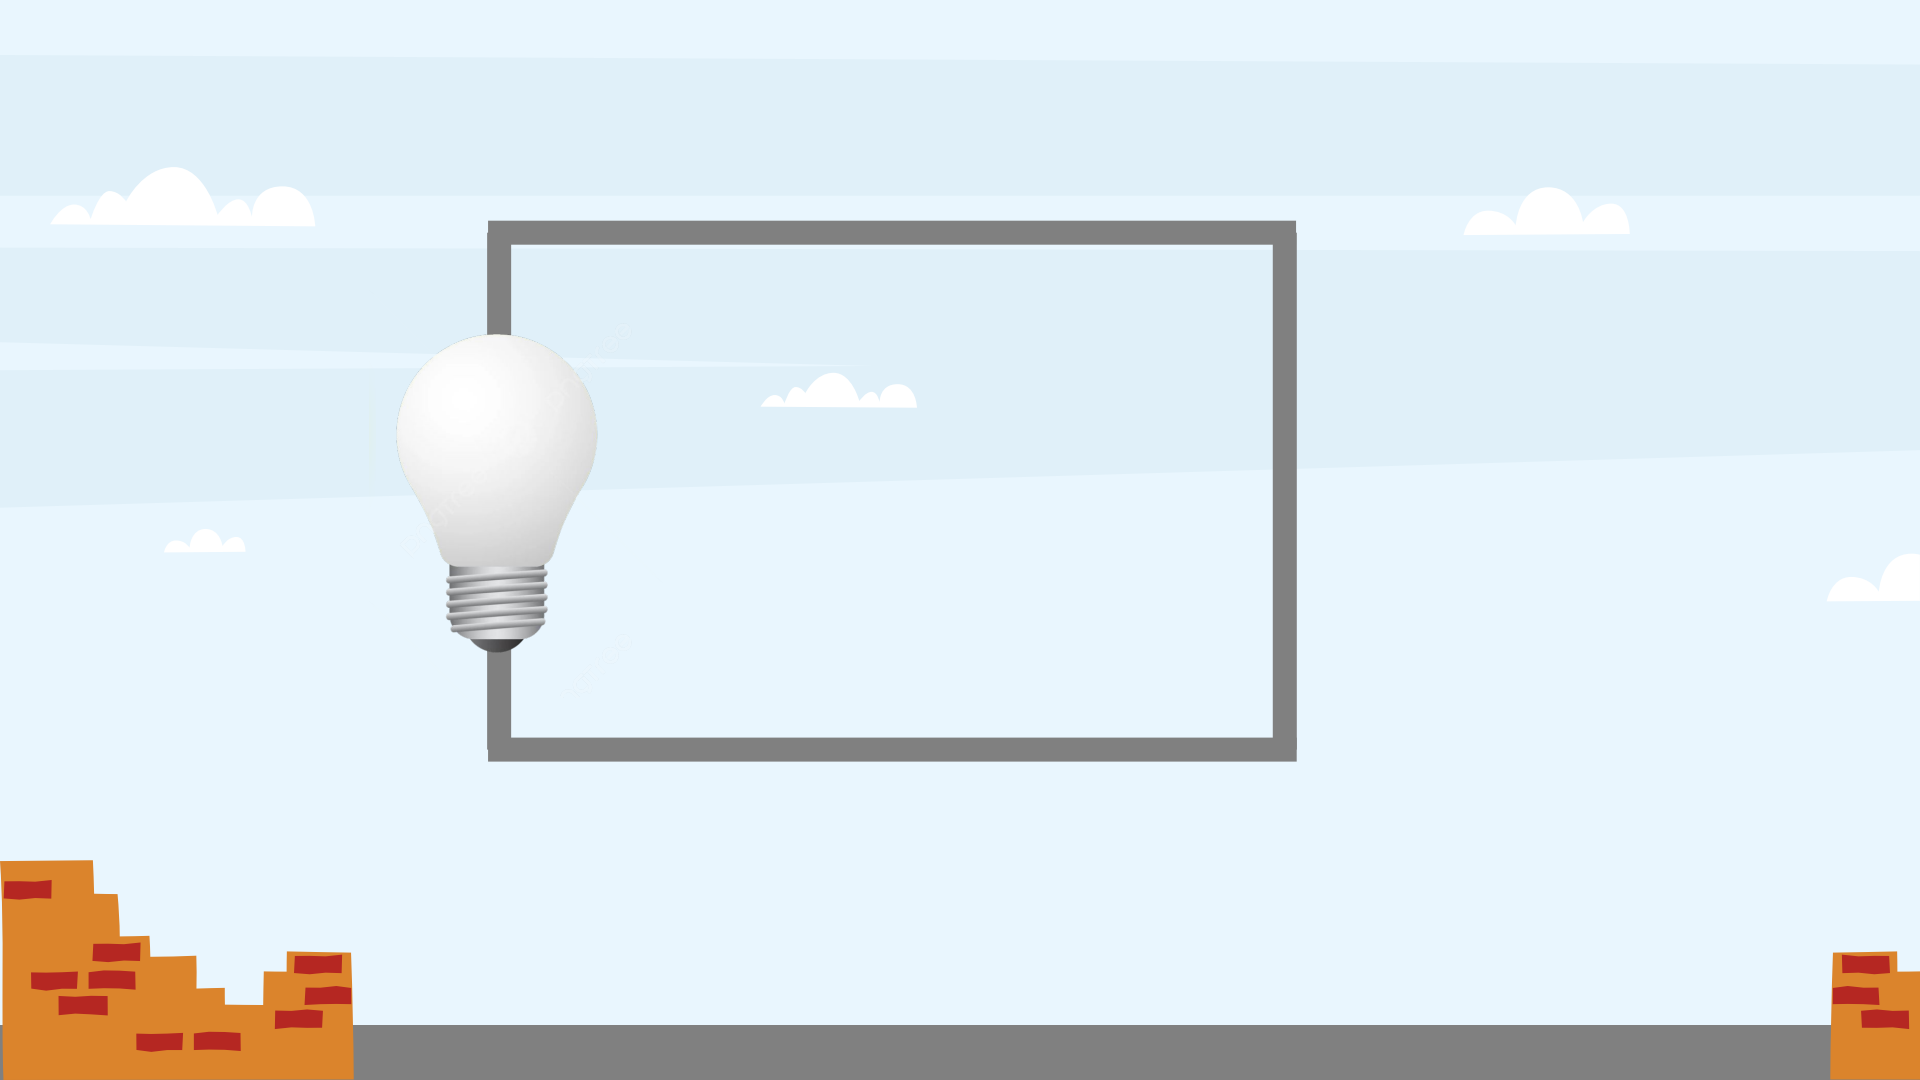

Electricity is a flow of electrical power or charge that can be carried by wires.

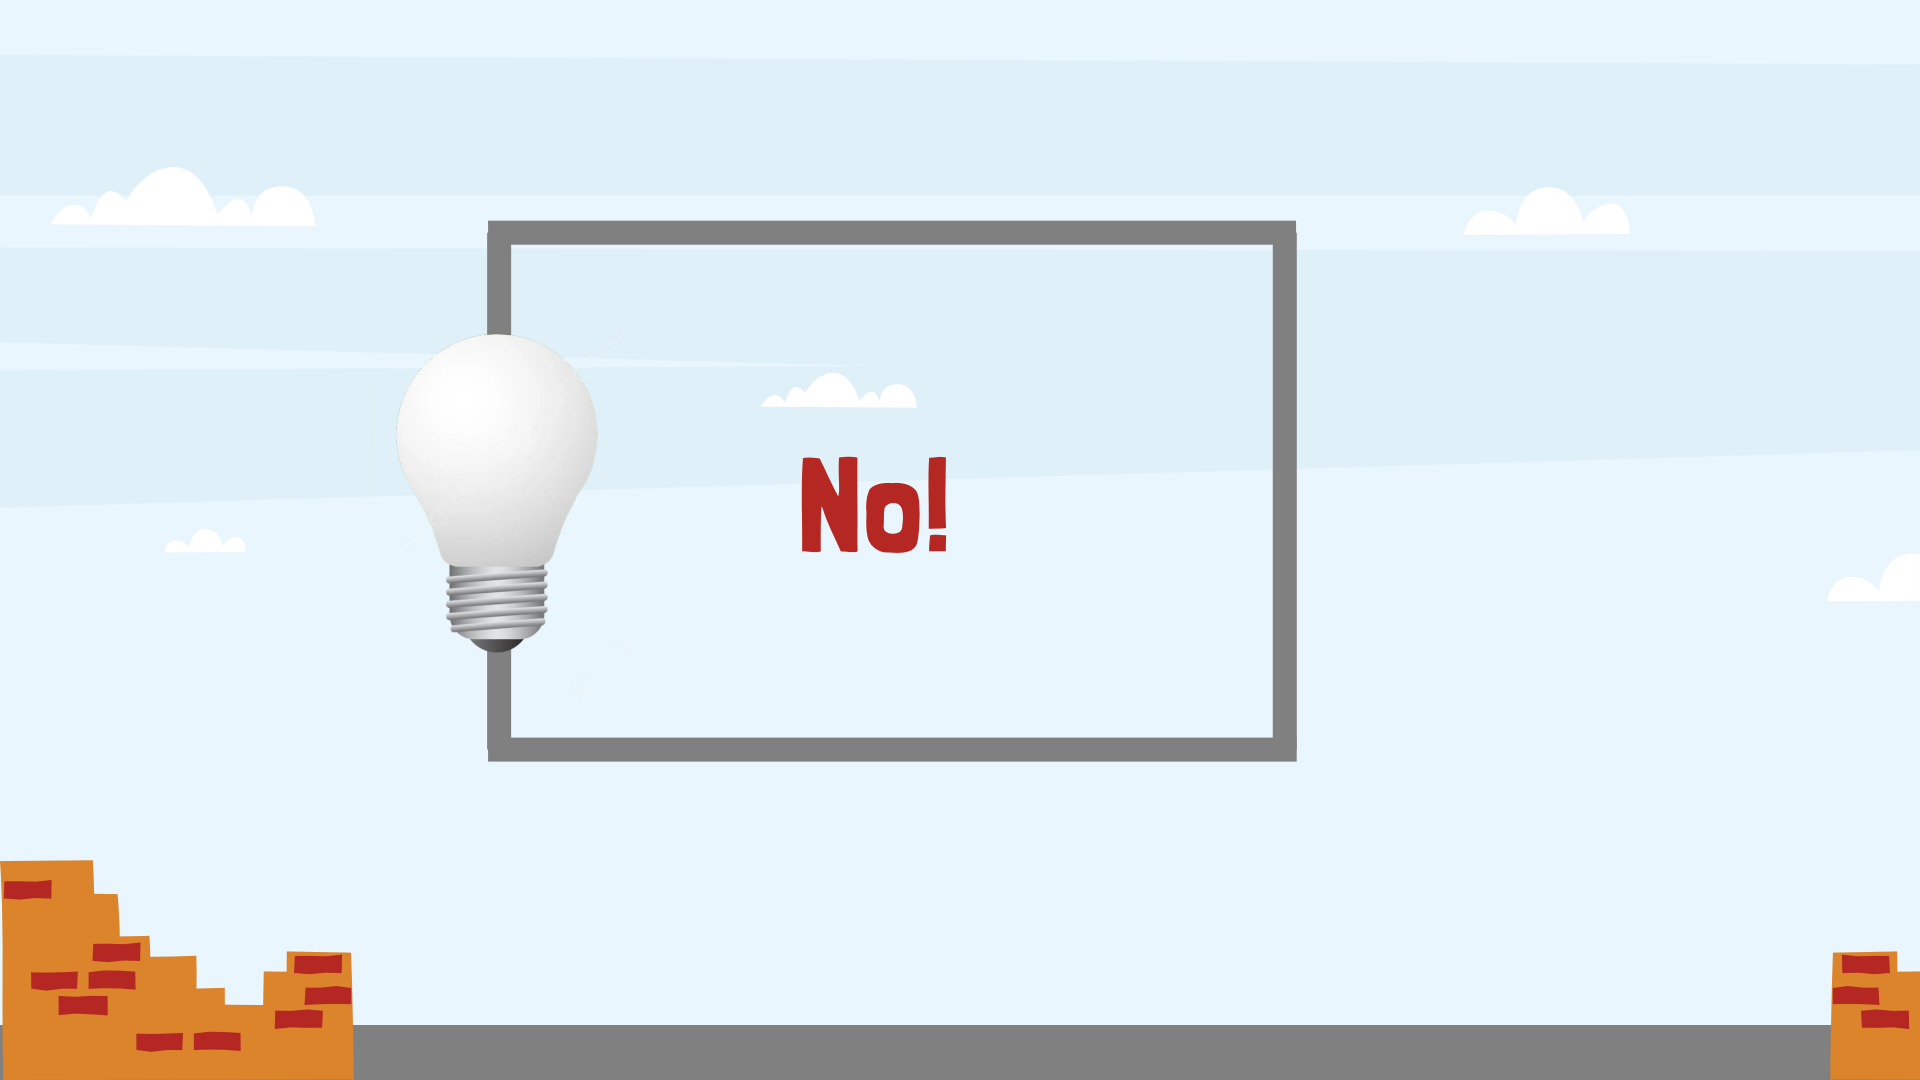

Electricity can be stored in batteries for future use!

The used up power has to go back into the battery to complete the **circuit**!

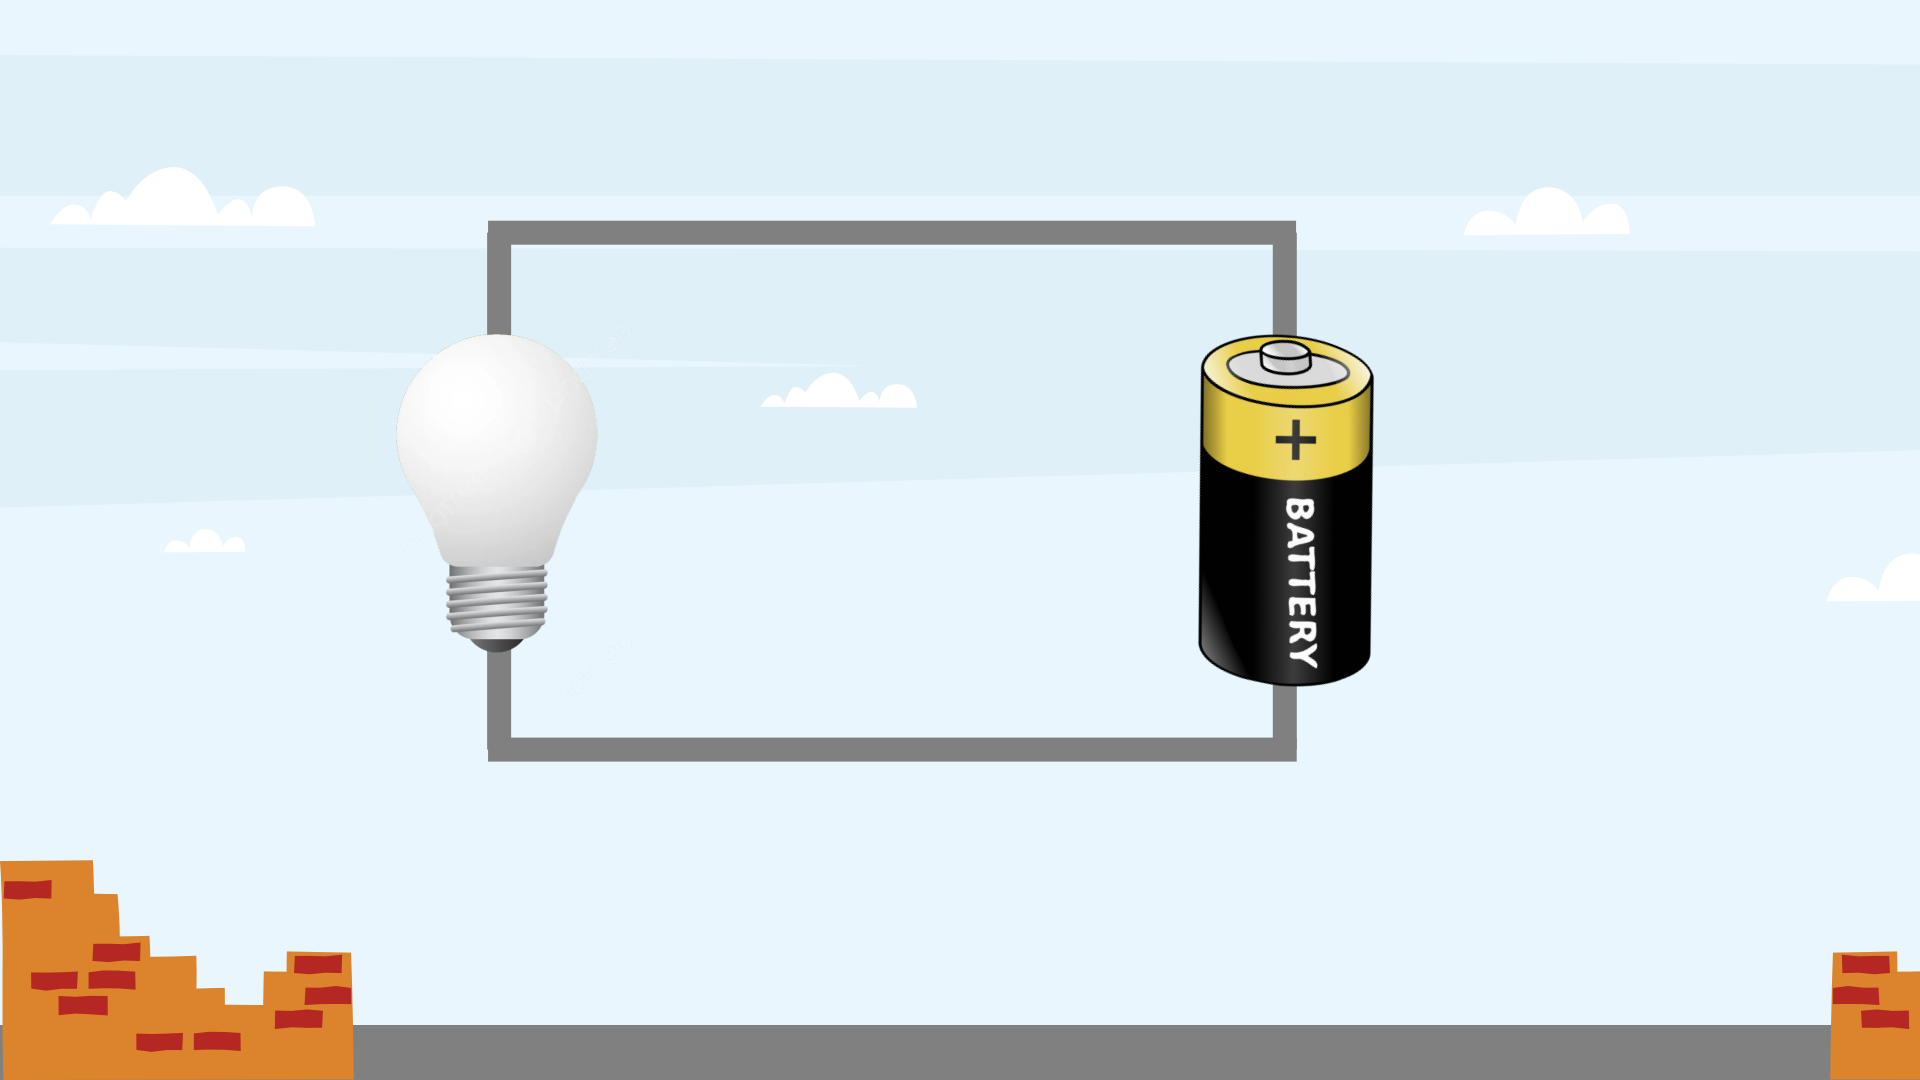

How do Planes Fly?

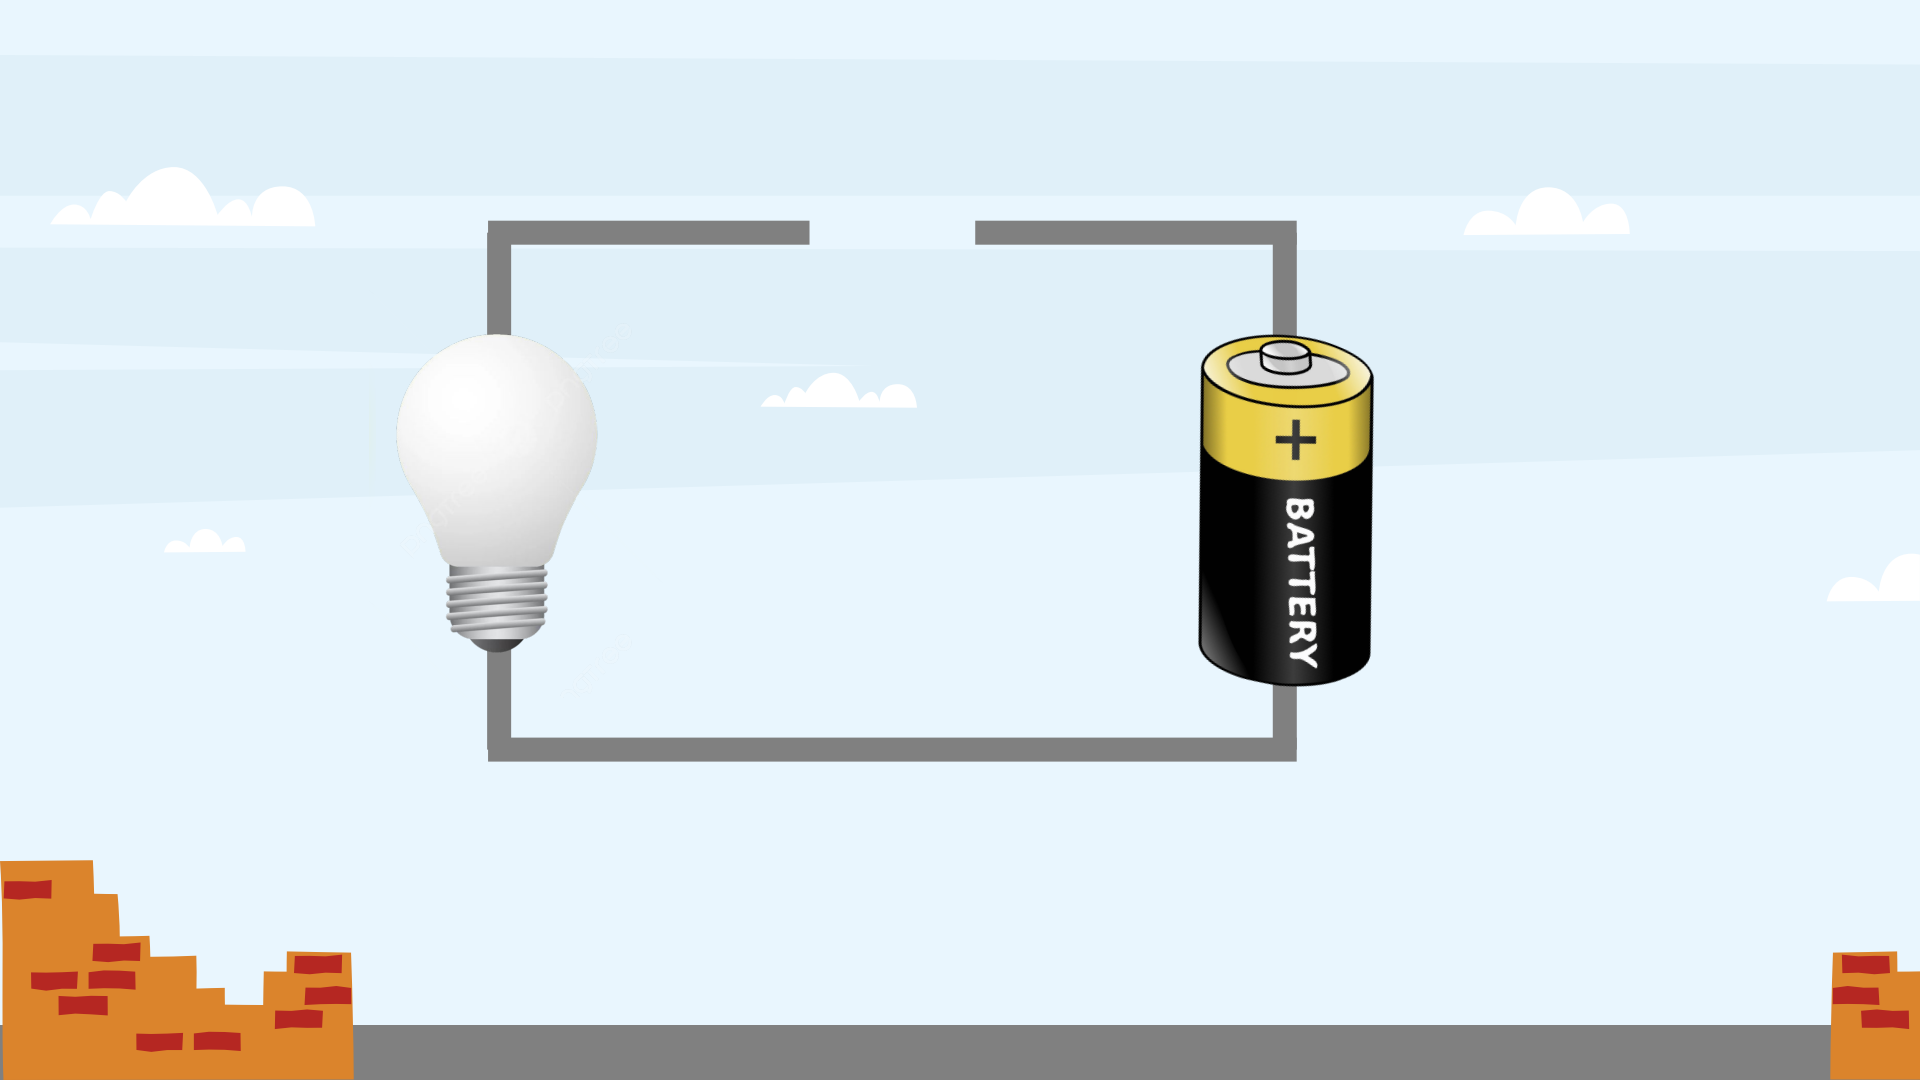

No!

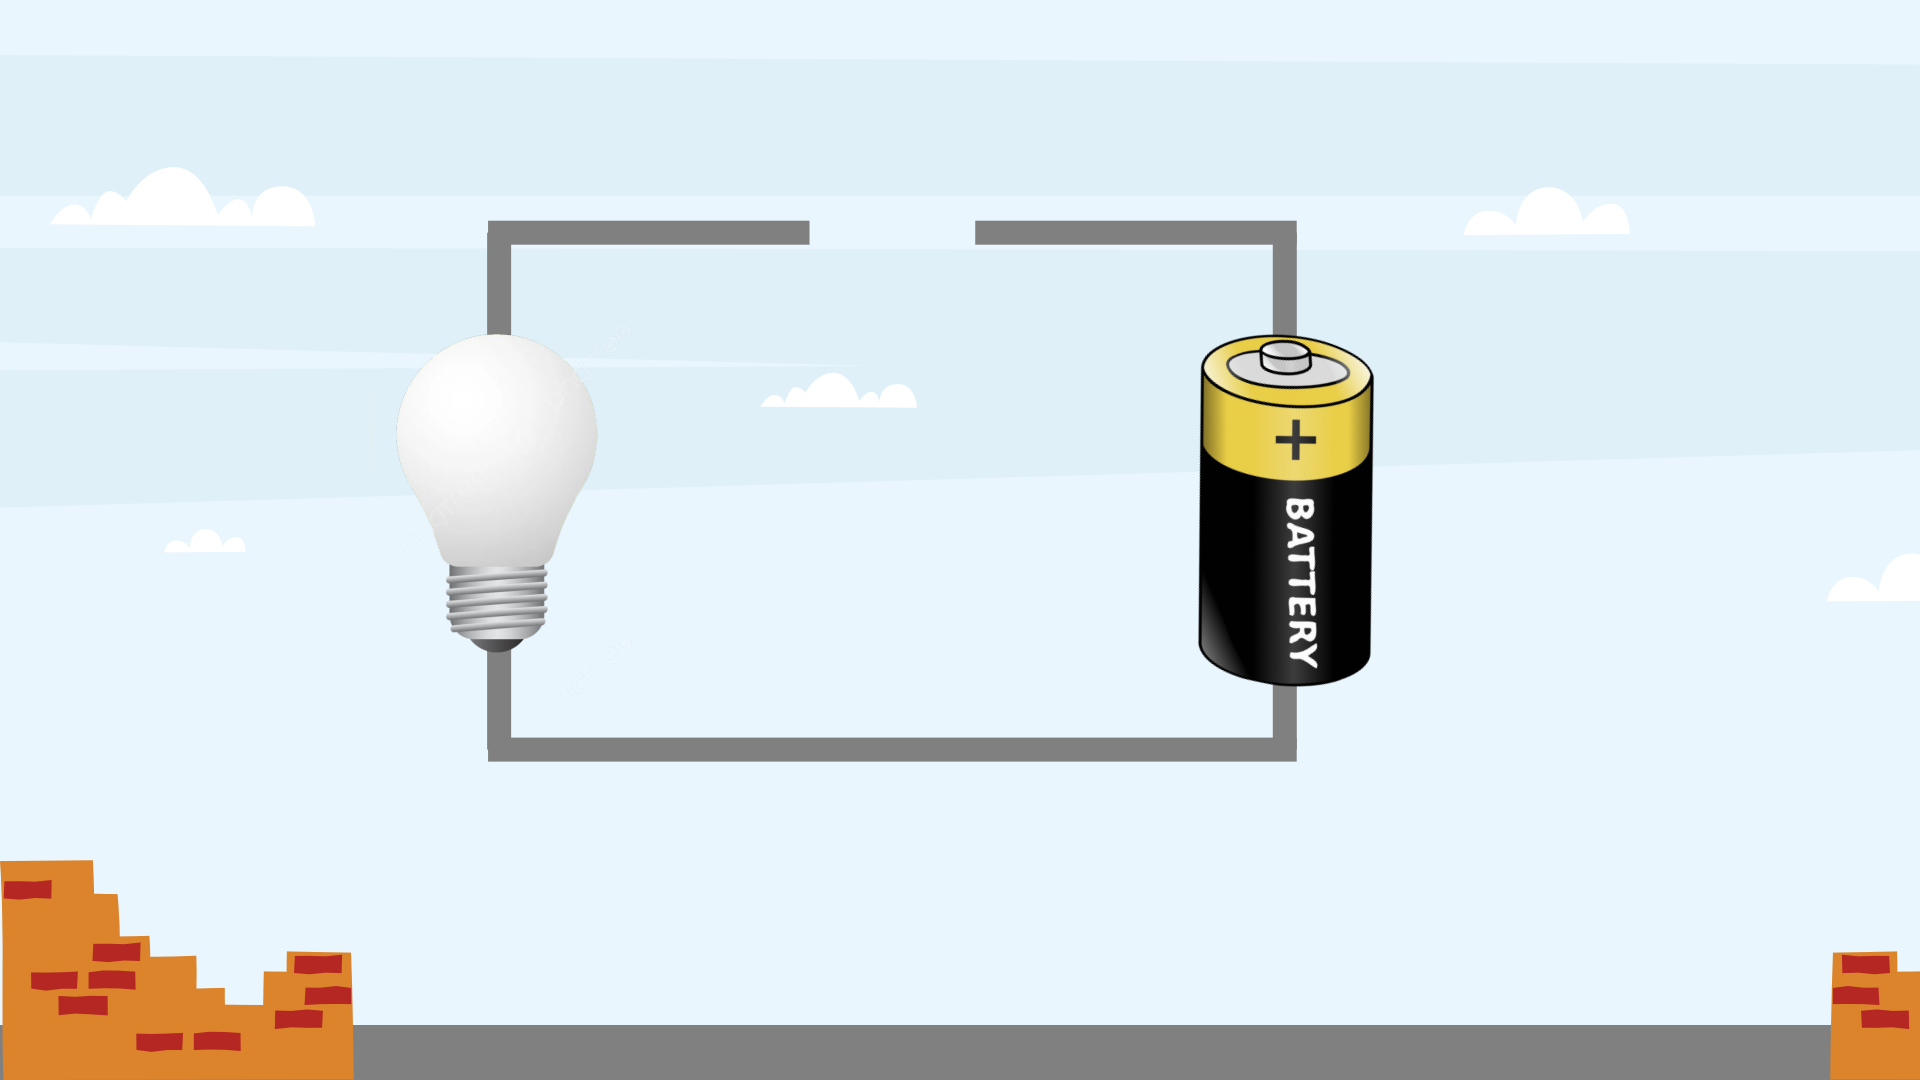

Yes!

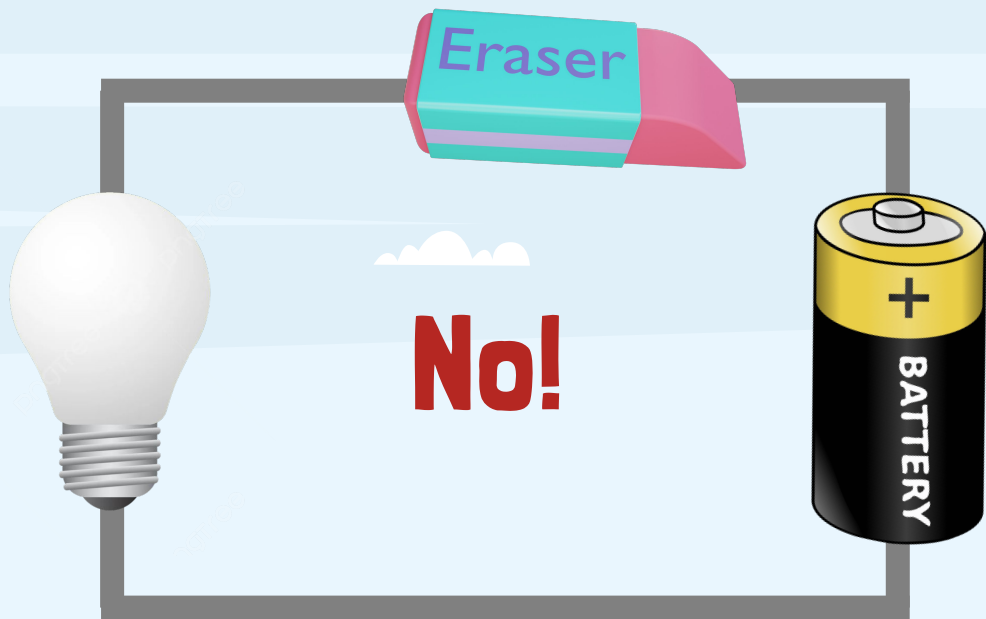

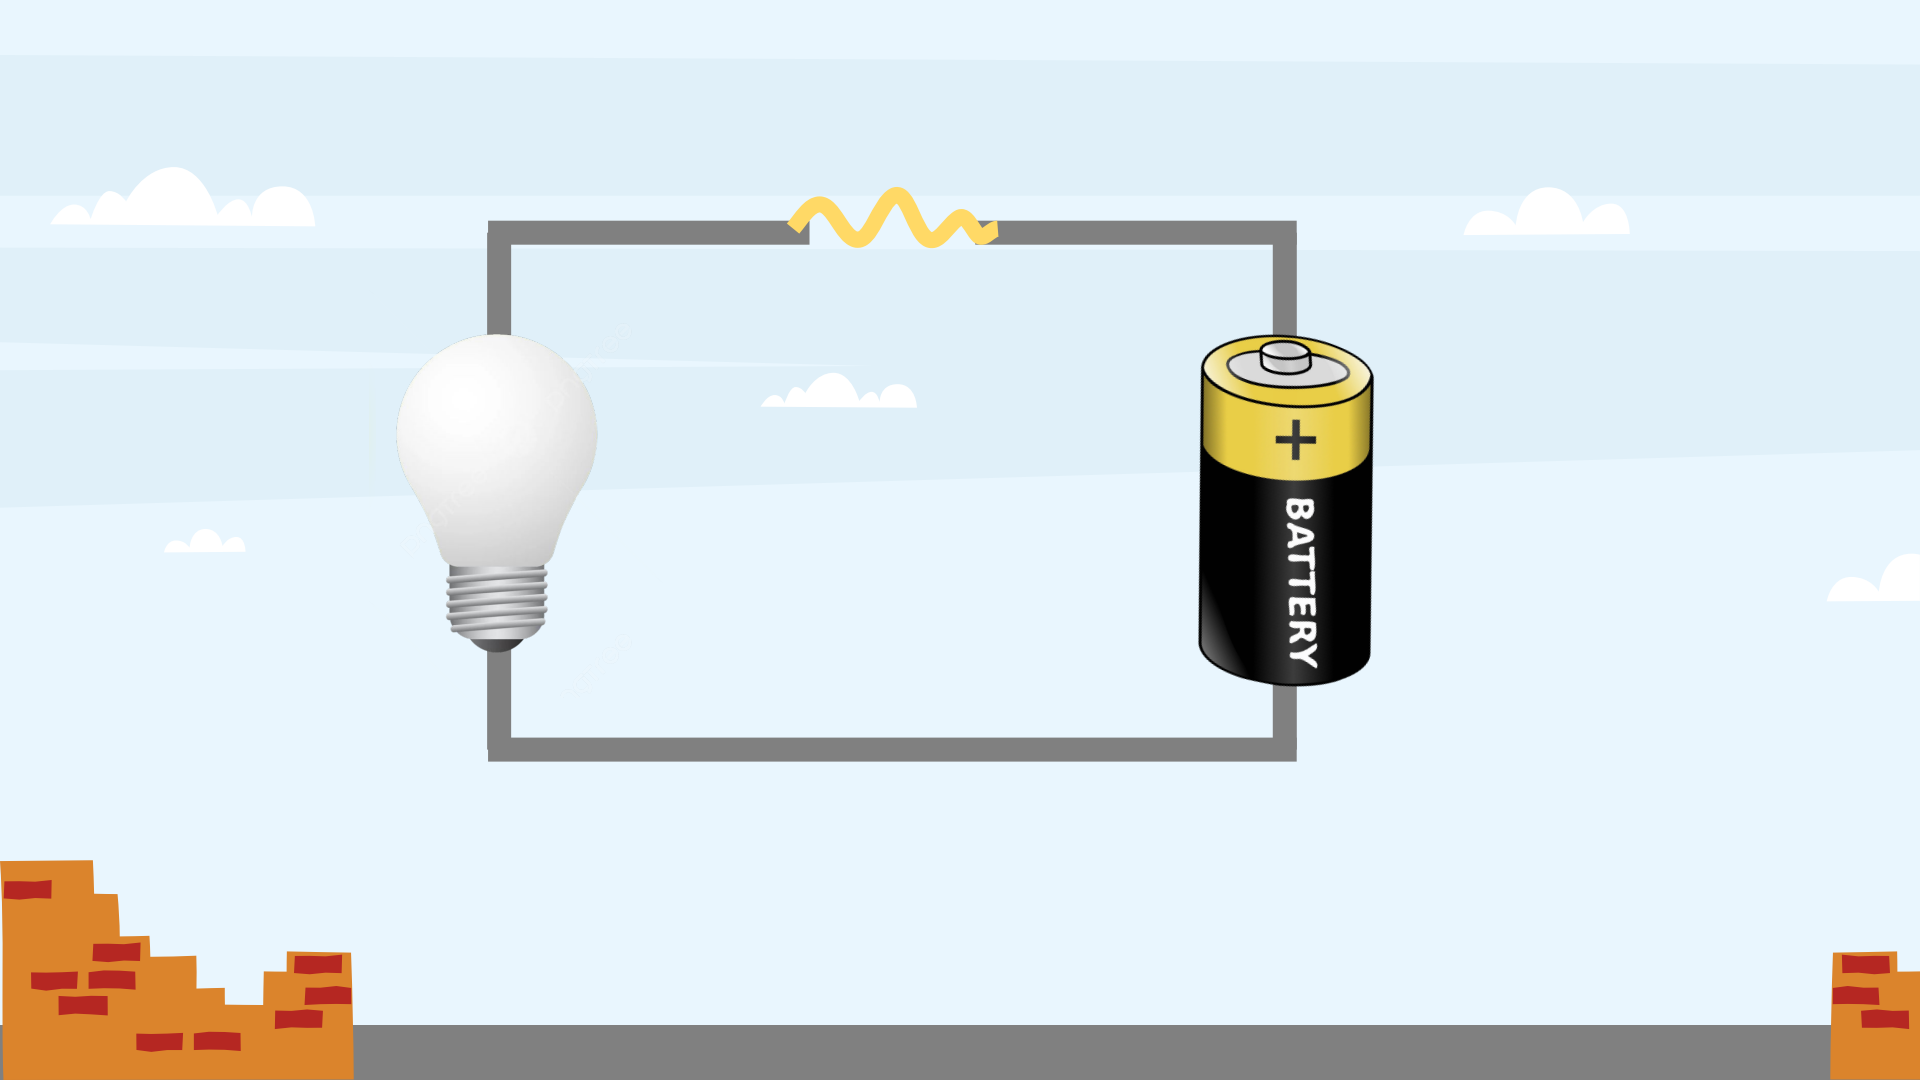

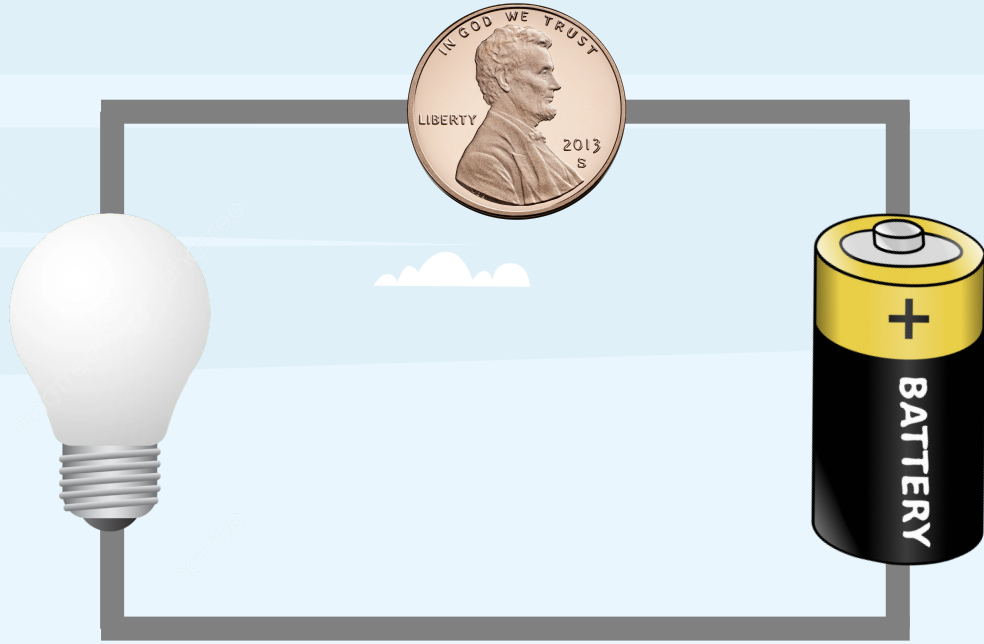

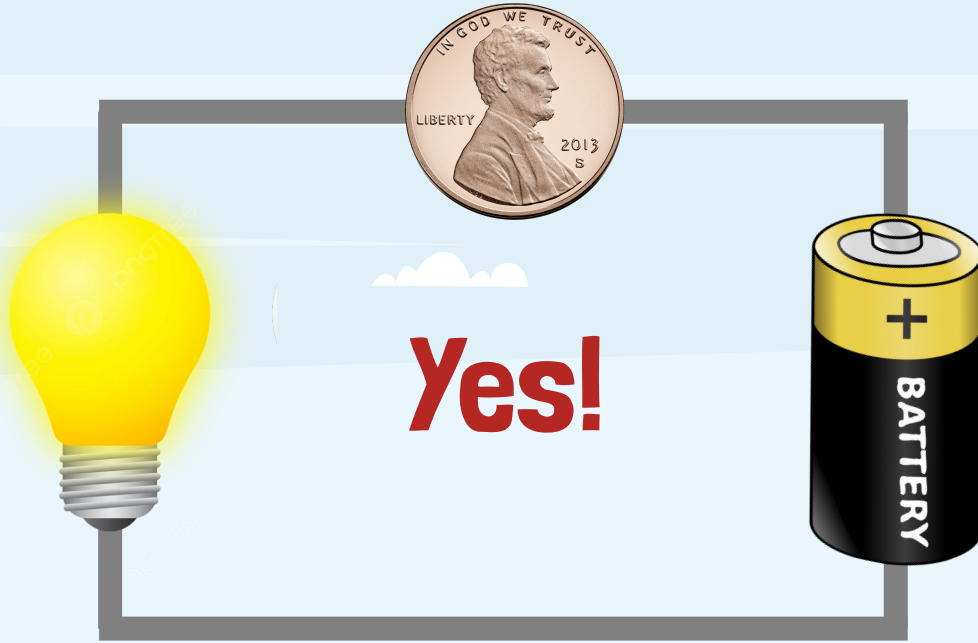

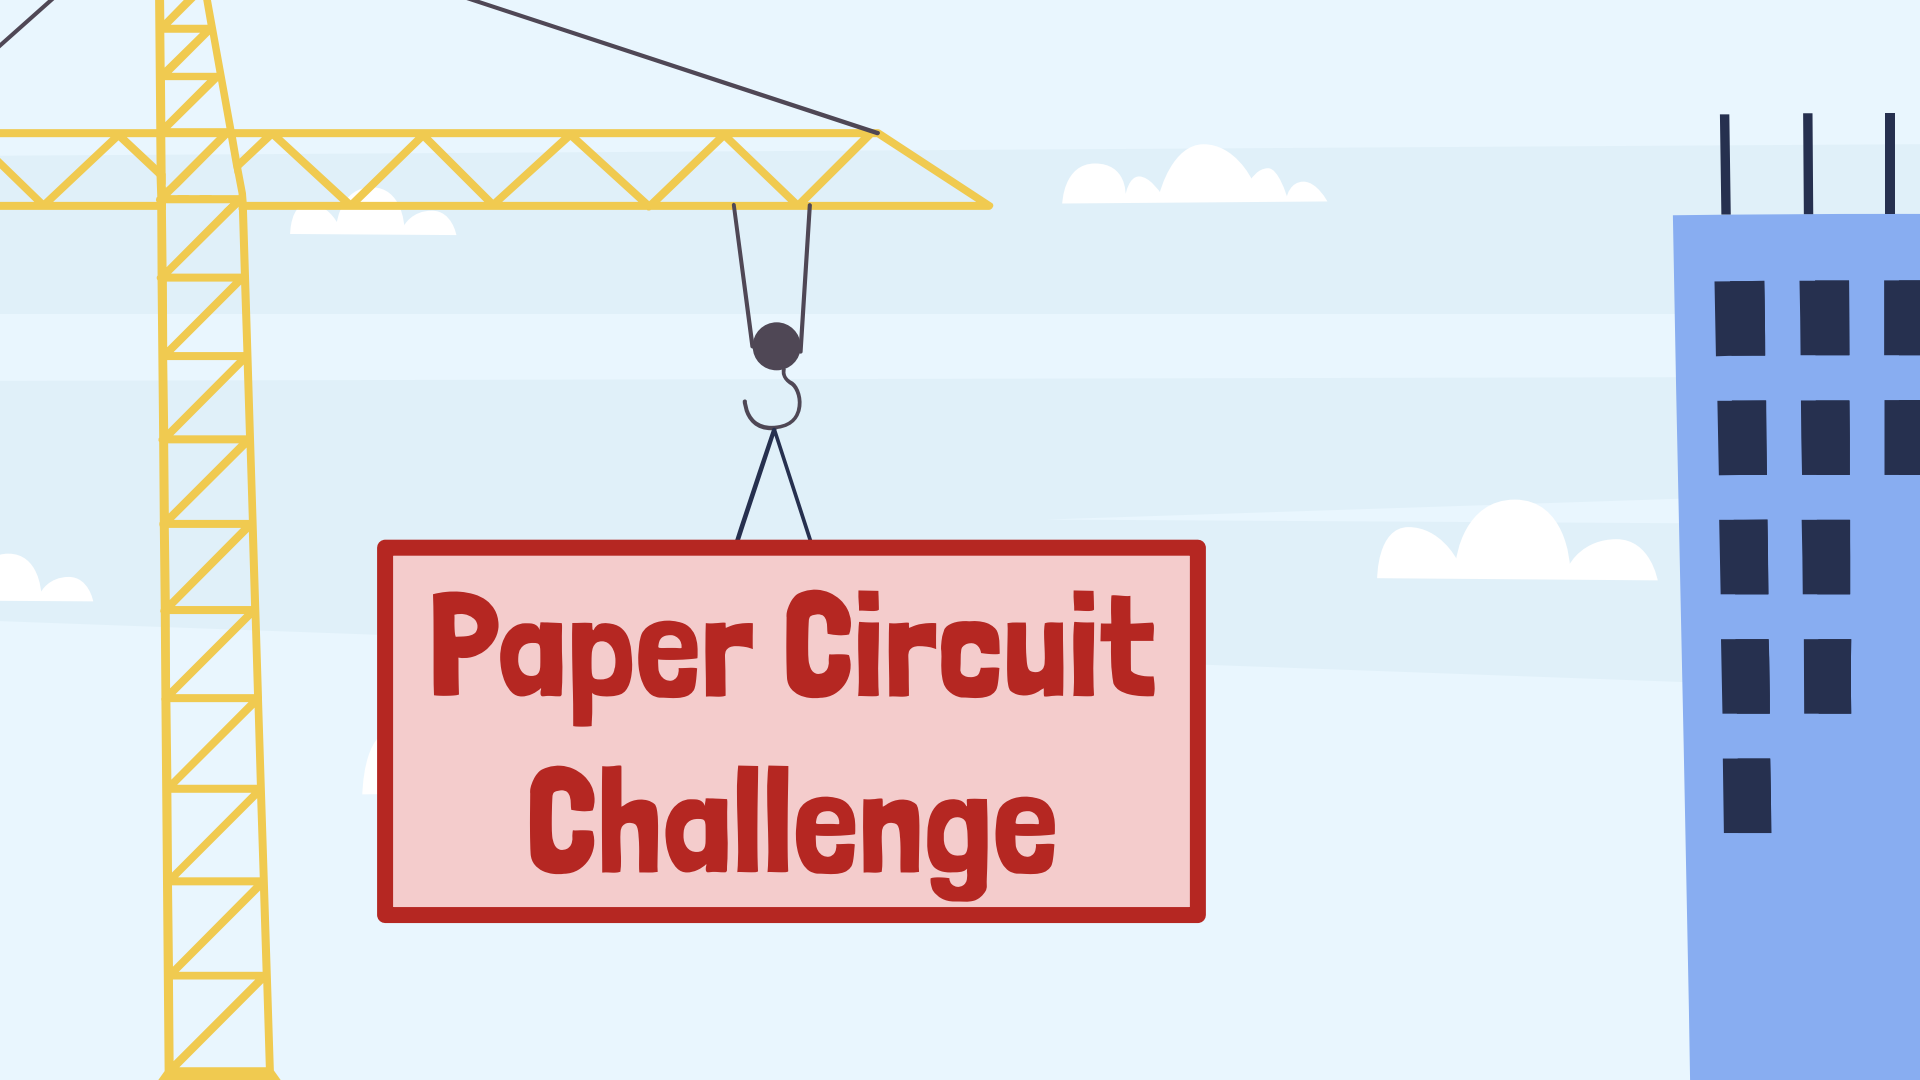

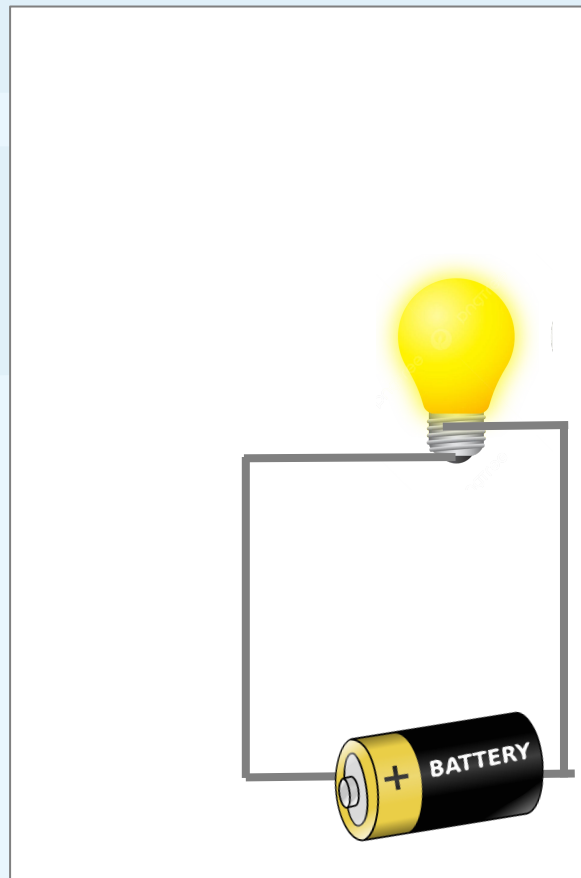

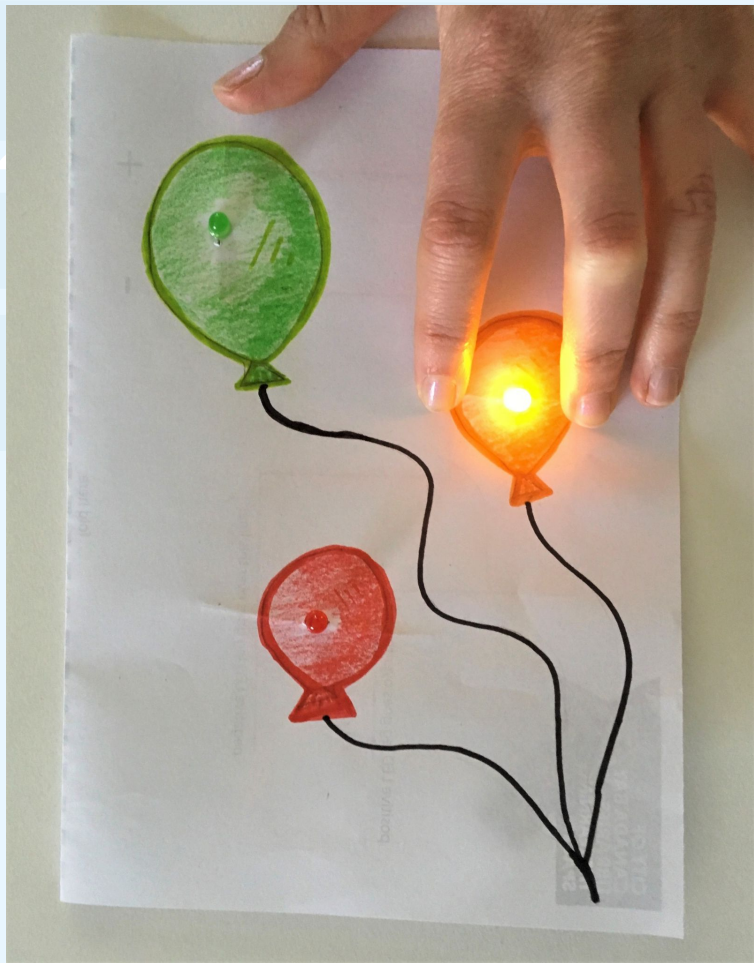

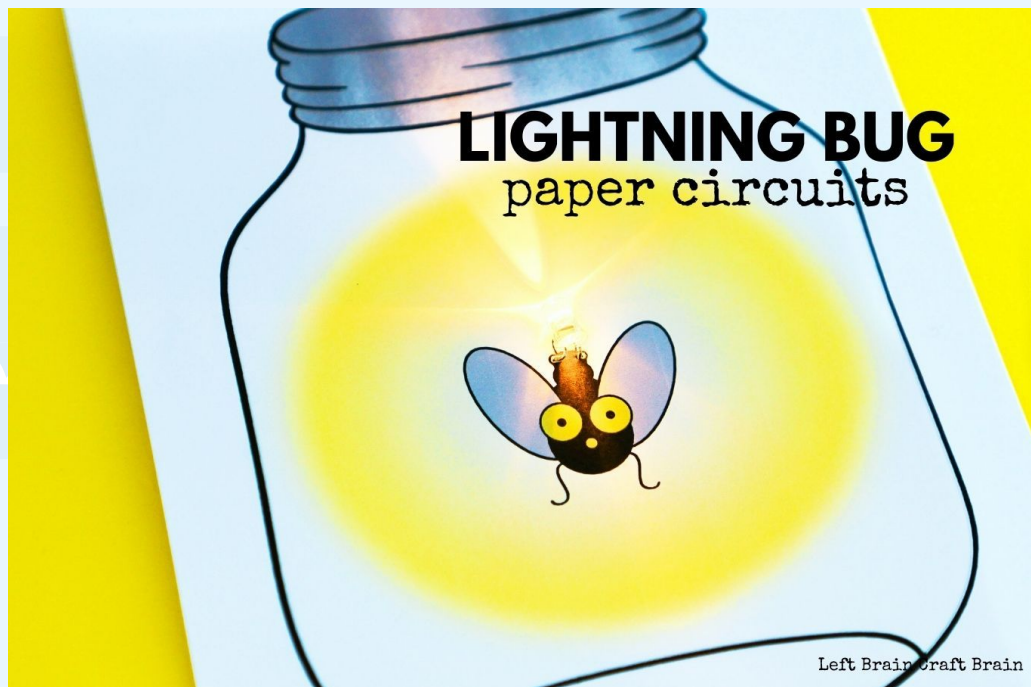

Paper Circuit Challenge

Discuss with your table

Draw your design plan

What worked well?

What didn't work?

How can we fix it?
